FRIENDS OF THE ARMY MEDICAL LIBRARY
Washington, D. C.

MICROFILM VIEWERS

The increase in the dissemination of medical literature to the widely scattered Army medical establishments by means of microfilm copies has been retarded by the lack of adequate reading equipment. The high cost and limited production of desk projectors has made it impossible to secure and distribute as many of these as needed by the various hospitals and services. To meet this situation, the staff of the Army Medical Library has been actively engaged in securing the production of monocular microfilm viewers which could be distributed in sufficiently large numbers to permit the widest possible utilization of the microfilm copying resources of this Library.

Three types of portable viewers will shortly be in production. Two of these are provided with adjustable lenses which magnify the text about eight times which permits easy reading of the finest print. The microfilm is held in place by a slide behind which a translucent screen diffuses the light coming either from a convenient external source or from a small electric bulb illuminated by a battery in the handle of the viewer.

The third viewer is constructed on a novel principle which doubtless will make it the most generally preferred of the three. It utilizes a concave mirror for the magnification of the text instead of a lens, and this type uses either an external or an internal source of light. Since the focus is fixed, no adjustment of an eyepiece is necessary. Also the opening through which the text is viewed is larger than is the case with the ordinary eyepiece. Finally the construction is so simple that the necessary materials and tooling required for its manufacture should permit a rapid and inexpensive production.

It is expected that the cost of these viewers will range between \$3.50 and \$7.00 and they will be distributed by the Medical Department of the Army to the medical officers in the various hospitals and units throughout the world. Arrangements will also be made for their distribution through the Navy, State Department, Office of Coordination of Inter-American Affairs, Department of Agriculture, Pan American Sanitary Bureau, and other agencies to all accredited officers engaged in medical and sanitary work wherever located. Orders from individuals will be transmitted by Photoduplication Service to the manufacturers for direct delivery to them.

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at \$1.00 per year. MICROFILM COPYING

Army Medical Library
Washington, D.C.

Microfilm copying of the periodical literature of the Army Medical Library was begun by Bibliofilm Service of the U.S. Department of Agriculture in 1936 and continued until September 1940 when an independent service under the auspices of the Friends of the Army Medical Library was established. Due to the expanding needs of microfilm copying for Regular Army and Federal establishments and other calls made upon it in the present emergency, additional equipment and enlarged facilities have been added at public expense. It has now become possible to substitute microfilm copying to a limited extent for interlibrary loans. Microfilms will be sent without charge in lieu of the loan of the books to all accredited medical librarians who prefer them or where books or journals cannot be loaned.

This service should result in a saving for the borrowing librarian since the responsibility for safekeeping and return of the books will be eliminated and no records will be required. The person receiving the microfilm will have no obligation for its return and may retain it for future use.

The total amount of work which can be done on this basis is of course limited by appropriations now available, hence there will be a limitation in the extent of the service, as to quantity. Orders for microfilm copying, except in particular cases, where bulk or commercial work is involved, will not ordinarily be accepted from individuals, but only through libraries, in the same manner as interlibrary loans.

The following postage should be included with each order for microfilm:

| | |
|---|-----|
| Articles totaling up to & including 100 p. send.... | 1½¢ |
| " " " " " 400 p. " | 3¢ |
| " " over 400 p. send 4 1½¢ stamps... | 6¢ |

Send orders to:
Photoduplication Service
Army Medical Library
Washington, D.C.

NOTE: The above offer refers only to extract copying from periodicals and does not cover making microfilm copies of entire volumes.

Most of the requests which have so far been received have not been accompanied by the postage mentioned above. Since this service replaces inter library loans which are not granted the franking privilege the microfilms can not be mailed out without the proper amount of postage.
